

## GARLIC POWDER

### Technology :

Manufacture of dehydrated garlic powder.

### Application and Use :

Garlic is used as a condiment and for flavoring mayonnaise, tomato ketchup / sauce, meat sausages, chutneys and pickles. It abets digestion and absorption of nutrients.

### Salient Features of Technology :

The process involves scrubbing of the bulbs manually under mild pressure to remove the papery skin. The bulbs are conditioned and dried. The dehydrated bulbs are powdered to desired mesh size and packed in airtight containers. The dried bulbs can also be made into flakes.

**Equipment and Machinery :** Pre-conditioning equipment, hot air drier, husk remover, air classifier, grinder, flaker and packaging unit.

**Raw Materials :** Garlic bulbs.

**Status of Commercialization** : Commercialized

**Minimum Economic Unit Size (MEUS) :** 200 kg/day
