

## GINGER POWDER

### Technology :

Manufacture of ginger powder.

### Application and Use :

As food flavouring agent and in pharmaceutical formulations.

### Salient Features of Technology :

Fresh ginger is cleaned with water to remove the adhering soil and dirt.

It is sliced and dried under controlled conditions. The resultant product is the sliced dry ginger. The dry ginger is passed through a pulveriser and ground to 40 mesh size to obtain ginger powder. The powdered ginger is fumigated if necessary and packed in suitable flexible pouches.

**Equipment and Machinery :** Slicer, hot air drier and pulveriser.

**Raw Materials :** Fresh ginger rhizomes.

**Status of Commercialization** : Commercialized

**Minimum Economic Unit Size (MEUS) :** 200 kg/day
