

## DEHULLED SESAME

### Technology :

Production of dehulled sesame.

### Applications and Use :

Confectionery, cooking oil, protein-rich formulations.

### Salient Features of Technology:

It is a dehulling process for easy removal of the husk from the sesame seed. The process consists of preliminary cleaning and grading, hot lye treatment, removal of the skin and pigments, thorough washing and drying. The dehulled sesame seed has uniform white color.

**Equipment and Machinery:** Pre-cleaning unit, destoner, pulper, hot air drier, vibratory screen and mixing tanks.

**Raw Materials:** Sesame seeds.

**Status of Commercialization** : Commercialized

**Minimum Economic Unit Size (MEUS)** : 1 tpd
